

## MULTIFUNCTIONAL LIFTER FOR EVERY ROUTE

The cost for waste collection will decrease considerably with the Geesink GEC 2510 lifter. Refuse haulers can empty a wide variety of containers with the integrated and easy to operate lifting device.

The GEC 2510 can empty two and four-wheel containers and eurocontainers up to 5000 litres on one route. Special adaptors or tools are not required. To load bags or bulky waste, the rave rail can be lowered to one meter.

Due to the reliable and solid construction the GEC 2510 can work year after year. All components are accessible to make easy cleaning and maintenance possible.
