

MF 300 DUAL COMPARTMENT VEHICLES

TOUGH ON TWO FRACTIONS

The Norba MF 300 is suited for collecting domestic waste and recycling materials.

The MF 300 has two completely sealed compartments to keep the fractions separated with no risk of cross contamination. Each compartment has its own compaction mechanism and ejector plate, for independent loading and discharge of the fractions.

The L500 MF lifting device is specifically designed for the MF 300 tailgate and provides split, independent emptying of bins. The L500 MF is fast and easy to operate to increase efficiency and lower operation costs.

The Norba MF 300 is available in volumes ranging from 11 to 21 m³.
